

Schedule: List features expected to be deployed with each iteration

Iteration 0 will contain little in the way of workable software beyond the skeleton of a website and a placeholder UI. Iteration 1 will focus on implementing the handling of information initially provided by the mentor, as well as initial attempts to keep the software FERPA-compliant. Iteration 2 will ensure the software is FERPA-compliant, update the UI as the mentor suggests, and handle more visually pleasing elements. The majority of the software's backend will be implemented in Iteration 1, with small changes as necessary in Iteration 2, and the majority of making the software look and work well will happen in Iteration 2.
